Fig. 1 Suppl. Expression patterns of RBOHD gene in the root of WT. One-week-old WT seedlings were inoculated with Pst-avrRps4. Total RNA was extracted from roots which were collected at indicated time points and detection by RT-PCR followed.

Fig. 2 Suppl. Autophagy is induced by BTH or avirulent Pst-avrRpm1. One-week-old GFP-ATG8a seedlings were inoculated with MgCl₂ (A) or Pst-avrRpm1 (B) for 3 h, or transferred to MS liquid medium without (C) or with (D) BTH (100 μM) for 6 h. Bars = 50 μm.
