

Subject and plant index

- 1-aminocyclopropane-1-carboxylic acid (ACC) oxidase
131-135, 233-237, 391-395
 α -amylase, cadmium, soluble sugars 117-123
Abies numidica 181-184
abscisic acid 321-324, 355-360, 475-478, 599-601
Acacia melanoxylon 269-275
ACC *see* 1-aminocyclopropane-1-carboxylic acid
Acer platanoides 65-73
adventitious root formation, proteins 33-39
Ageratum conyzoides 309-311
age-related polyploidy in somatic embryos 339-345
Agrobacterium rhizogenes 447-450
allelopathic effects on soil microbial population and
plants 269-275, 635-638
allozymes, genetic markers 207-211
Amaranthus caudatus 309-311
Amaranthus rudis 619-622
amino acids, microshoots development *in vitro* 13-18
amino acids, salt stress, alleviation by thiamine
541-545
Anacardium occidentale 175-179
anthocyanins, supplemental UV-B 467-469
antibiotics, *in vitro* culture 19-24, 25-31, 347-353
antifungal protein from pearl millet seeds 417-421
antioxidant enzymes during leaf senescence 41-46
apoplast, electrical potential difference 361-366
apoplastic and symplastic transport of ^{14}C
photosynthates 517-521
apoplastic water transport 247-252
apricot 41-46
ascorbate peroxidase during leaf senescence 41-46
ascorbic acid, alleviation of water stress 141-143
ascorbic acid, salt stress counteraction 253-261
asparagine, microshoot development 13-18
Atriplex prostrata 595-597
auxins 1-6, 13-18, 19-24, 25-31, 33-39, 167-174,
175-179, 181-184, 333-337, 339-345, 347-353,
431-433, 475-478, 489-495, 497-501, 503-507
Avicennia germinans 435-438
Azospirillum inoculation 631-634
bacterial contaminants on algae, temperature 367-371
barley 25-31, 145-147, 157-159, 219-224
barley cultivars, frost tolerance 145-147
Bayoud disease, date palm resistance 125-130
bean 75-81, 111-115, 517-521, 523-528, 607-609
Beta vulgaris 523-528
bioassay, donor-receiver, allelopathic potential, root
exudate 635-638
bioassay, *Pisum* 439-441
biogenic emissions, biotic and abiotic factors 481-487
biomass distribution, vertical, UV-B radiation 385-389
blackgram, salinity stress, seed germination 587-589
Botrytis cinerea 555-565, 573-578
Brassica juncea 149-152
Brassica oleracea, var. *capitata* 277-281
Brassicaceae systematics, implication of seed proteins
547-553
bromegrass, interspecific crosses 47-51
Bromus arvensis 47-51
Bromus erectus 47-51
Bromus inermis 47-51
cabbage 277-281
cacti, CAM plants 19-24
cadmium, accumulation in roots and shoots 471-473
cadmium, detoxification *in vitro* 627-630
cadmium, photosynthesis 59-64
cadmium, sister chromatid exchanges 591-594
cadmium, soluble sugars, enzyme activities 117-123
Cajanus cajan 13-18
calcium inhibitor, shoot regeneration, thidiazuron
611-613
calcium, nitrogen supply, water stress 459-461
calcium protection, ionic relation and interaction 95-99
calcium, seawater and NaCl salinities 95-99
callus *see in vitro* culture
calmodulin, shoot regeneration 611-613
Calycanthus floridus 239-245
capillary zone electrophoresis 439-441
carbenicillin, organogenesis from callus culture 19-24
Cardiospermum halicacabum 603-606
carotenoids accumulation, microsporogenesis 443-445
carotenoids as antioxidants during leaf senescence
41-46
carotenoids, heavy metals 59-64, 471-473
carotenoids, high temperature stress 379-384
carotenoids, salt stress 95-99
carrob 185-188
Carthamus tinctorius 503-507
cashew 175-179
cassava starch, sago as gelling agent for *in vitro* culture
293-296
Cassia angustifolia 141-143
Castanea sativa 239-245
catalase during leaf senescence 41-46
catalase, ploidy level, water stress 89-94
catalase, salt stress 89-94, 587-589
cefotaxime, *in vitro* culture 19-24
cell culture *see in vitro* culture
cell death, defense mechanisms 555-565
cell ultrastructure, cotyledon rRNA distribution in
palisade cells 355-360
cell wall-bound phenolics 125-130
cellulases, date palm resistance to *Fusarium oxysporum*
125-130
cembran pine 225-232
Ceratonia siliqua 185-188

- Cercis siliquastrum* 239-245
Chara vulgaris 439-441
Chenopodium rubrum 361-366
chickpea 131-135, 195-202, 333-337
chloramphenicol, *in vitro* culture 19-24
chloroform in forest soil 317-320
chlorogenic acid, photoperiod, morphogenesis 615-618
chlorophyll fluorescence *see* fluorescence, chlorophyll
chlorophylls, heavy metal accumulation in roots and shoots 59-64, 471-473
chlorophylls, high temperature 53-57, 213-218, 379-384
chlorophylls, leaf ontogeny 41-46, 373-378
chlorophylls, in cultivated and wild species 423-425
chlorophylls, iron deficiency 313-316
chlorophylls, microsporogenesis 443-445
chlorophylls, phenotype stability *ex vitro* after *in vitro* culture 321-324
chlorophylls, polyamines 53-57, 529-533
chlorophylls, salt stress 95-99
chlorophylls, supplemental UV-B, growth 467-469
chlorophylls, transgenic plants 447-450
chlorophylls, triticale and its parents 427-430
chlorophylls, water stress, rehydration 75-81, 83-87, 141-143, 263-267
chloroplast, iron deficiency 313-316
chloroplast pigments, free radical scavengers, ozone 225-232
chloroplast ultrastructure, essential oil, lavandin 1-6
chloroplast ultrastructure, salicylic acid 219-224
chloroplast, water stress, CO₂ concentration 149-152
chlorpromazine, shoot regeneration 611-613
chromium, germination, photosynthesis 111-115
chromosomal morphology, structure 105-109, 203-206
Chrysanthemum coronarium 411-415
Cicer arietinum 131-135, 195-202, 333-337
Cicer echinospermum 195-202
Cicer reticulatum 195-202
Citrus lanatus 305-307
clover 385-389
cluster analysis in Brassicaceae systematics 547-553
CO₂, culture *in vitro*, autotrophy development 167-174
cobalt, photosynthesis 111-115
cobalt, sister chromatid exchanges 591-594
cocksfoot 385-389
Colletotrichum orbiculare 305-307
competition in canopy, biomass distribution 385-389
competition, intraspecific 619-622
conductance, hydraulic, shoot 239-245
copper, accumulation in roots and shoots 105-109, 471-473
Corylus avelana 239-245
Coryphantha elephantidens 19-24
cotyledon cell ultrastructure, rRNA distribution in palisade cells 355-360
cotyledon-like structures, shoot regeneration *in vitro* 333-337
Crotalaria longipes 455-458
crystalloid and matrix proteins, seed protein bodies 137-140
Cucurbita pepo 355-360
cultivar differences, allelopathic potential 635-638
cultivar differences, salt tolerance 405-410
cultivar differences, somatic embryogenesis 503-507
cultivar differences, soybean/weed competition 619-622
Curcuma longa 297-299
cysteine, microshoot development 13-18
cytokinins 1-6, 7-12, 13-18, 19-24, 33-39, 75-81, 141-143, 167-174, 333-337, 339-345, 347-353, 355-360, 431-433, 451-453, 489-495, 503-507, 523-528
cytosolic pH, nitrate 131-135
D1 protein synthesis, phenotype stability *ex vitro* after *in vitro* culture 321-324
2,4-dichlorophenoxyacetic acid, overcoming seed inviability 497-501
Dactylis glomerata 269-275, 385-389
date palm 125-130, 431-433
defense gene activation, cell suspension culture 555-565
defense-related protein *see* pathogenesis-related protein
dehydration tolerance, germination 397-403
dendrograms in Brassicaceae systematics 547-553
Digitaria sanguinalis 309-311
dimethylaminopurin, micropropagation 431-433
dinitrogen fixation, nodules 131-135
Dioscorea cayenensis 535-539
DNA flow cytometry, chromosomal changes in *in vitro* culture 339-345
dormancy relieving compounds 301-303
drought *see* water stress
dwarfing genes, nitrogen supply 153-155
ectomycorrhizal fungi, drought 263-267
electrical potential difference, metabolic inhibitors 361-366
electron transport rate, chloroplast, iron deficiency 313-316
elephant tusk cactus 19-24
elicitor-stimulated induction of defense mechanisms 555-565
elongation, stomata, *in vitro* culture 161-165
embryo culture, polyphenol oxidase, salt stress 607-609
embryo rescue, overcoming seed inviability 497-501
emissions of volatile organic compounds, abiotic and biotic factors 481-487
endopeptidases, triticale 283-288
endosperm reserves, germination, water deficit 397-403
epidermis, adaxial, abaxial, salicylic acid 219-224
epidermis, cadmium 59-64
epidermis, water stress, elevated CO₂ concentration 149-152
essential oil, lavandin, phytohormones 1-6
ethylene biosynthesis, nodules 131-135

- ethylene biosynthesis, sodium bisulfite 233-237
ethylene emission by plants into atmosphere 481-487
ethylene evolution *in vitro*, microshoot development 13-18
ethylene, frequency of somatic embryogenesis 503-507
Eucalyptus globulus 269-275
ex vitro phenotype stability after culture *in vitro* 321-324
fertility, *Chara*, gibberellic acid contents 439-441
fir, rhizogenesis *in vitro*, somatic embryos 181-184
flavonoids, supplemental UV-B, growth 467-469
flax 517-521, 611-613
flow meter, high pressure, stem water transport 239-245
flowering, *in vitro*, phenols, rooting 615-618
fluorescence, chlorophyll 53-57, 75-81, 313-316, 529-533
free radical scavengers, photosynthetic pigments, ozone 225-232
frost hardiness and tolerance, callus cell cytology 325-331
frost tolerance, nucleic acids 145-147
fruit, fungal infections, β -glucosidase 573-578
fungal infection, β -glucosidase, seed, ovary, fruit 573-578
fungi incubation, culture conditions 305-307
Fusarium oxysporum f.sp. *albedinis* 125-130
fusicoccin, electrical potential difference across intact plant 361-366
fusicoccin, germination, salt stress 301-303
gamma-radiation, mutagenesis, *in vitro* culture 189-193
gas exchange, benzyladenine, hydroxybenzyladenine 523-528
gas exchange, chloroplast pigments, cadmium 59-64
gas exchange, culture *in vitro*, autotrophy development 167-174
gas exchange, maximum, shoot hydraulic conductance 65-73
gas exchange, nitrogen metabolism 153-155, 289-292
gas exchange, phytohormones 141-143, 523-528
gas exchange, salt stress 405-410, 435-438
gas exchange, triticale and its parents 427-430
gas exchange, water stress, rehydration 75-81, 141-143, 153-155, 289-292, 475-478
gelling agents, *in vitro* culture 7-12
genetic markers, isozymes, maize 207-211
genetic variation, embryo derived callus culture, NaCl 489-495
germination, endosperm reserves, water deficit 397-403
gibberellins 175-179, 333-337, 439-441, 475-478
 β -glucuronidase 347-353
glands formation, essential oil, phytohormones 1-6
Glomus aggregatum 277-281
Glomus fasciculatum 277-281
Glomus mosseae 277-281
glucose, micropropagation on low sugar media 7-12
glucose-6-phosphate dehydrogenase, TMV-infected tobacco 567-572
 β -glucosidase, response to fungal infections 573-578
glutamate dehydrogenase activity, temperature, methyl jasmonate 367-371
glutamate dehydrogenase, *Azospirillum* inoculation 631-634
glutamine, microshoot development 13-18
glutamine synthetase, *Azospirillum* inoculation 631-634
glutathione reductase 509-516
Glycine max 405-410, 619-622
glycinebetaine accumulation, Na and K salts, osmotic potential 595-597
Gossypium hirsutum 475-478
grapevine, elicitor-stimulated induction of defense mechanisms 555-565
halophytes, glycinebetaine accumulation 595-597
heat stress, shock protein 379-384
heat stress, spermidine, chlorophyll fluorescence 53-57
heavy metals accumulation in roots and shoots, mustard 471-473
heavy metals detoxification *in vitro*, phytochelatin 627-630
heavy metals, photosynthesis 59-64, 111-115
heavy metals, soluble sugars 117-123
heterogeneity of plant, stomata 161-165
Hill reaction, germination 111-115
hop, *in vitro* micropropagation 7-12
hop latent viroid infection, lupulin, meristem culture 579-585
Hordeum vulgare 25-31, 145-147, 157-159, 219-224
humidity, salt tolerance, growth 405-410
Humulus lupulus 7-12, 579-585
husk leaf, novel protein 623-625
hydraulic conductance, leaf, shoot 239-245
hydraulic conductance, stomata sensitivity to leaf water status 65-73
Hydrilla verticillata 95-99
hydroxybenzyladenine, gas exchange 523-528
hygromycin, heat shock, gene transfer 25-31
hygromycin, organogenesis from callus culture 19-24
hygromycin phosphotransferase (*hph*) gene 25-31
hygromycin resistance, transposition of *Ac* mobile element 347-353
hypocotyl, adventitious root formation 33-39
hypocotyl, shoot regeneration 611-613
Hyptis pectinata 423-425
Hyptis sinuata 423-425
in vitro culture, autotrophy development 161-165, 167-174
in vitro culture, bud proliferation 431-433
in vitro culture, chromosomal changes 339-345
in vitro culture, frost tolerance 325-331
in vitro culture, heavy metal detoxification 627-630
in vitro culture, infection, defense mechanism 555-565, 579-585

- in vitro* culture, micropropagation, regeneration 13-18,
 19-24, 189-193, 333-337, 391-395, 431-433,
 603-606, 611-613
in vitro culture, overcoming seed inviability 497-501
in vitro culture, phenotype stability *ex vitro* 321-324
in vitro culture, phenylurea-adapted callus 451-453
in vitro culture, root formation 175-179, 181-184,
 615-618
in vitro culture, sago as gelling agent 293-296
in vitro culture, salt stress 489-495, 607-609
in vitro culture, somatic embryogenesis 157-159,
 321-324, 503-507
in vitro culture, somaclonal variation, salt stress
 339-345, 489-495
in vitro culture, sugars as C source, low sugar media
 7-12, 161-165, 185-188, 321-324, 503-507
 incompatible crosses, overcoming seed inviability
 497-501
 inflorescence, immature, regeneration *in vitro* 157-159
 inheritance of chloroplast DNA, interspecific *Bromus*
 crosses 47-51
 insertion profile, stomata density and sizes 161-165
 intra-specific genetic polymorphism 455-458
 introgression lines, rice 203-206
 invertase, cadmium, soluble sugars 117-123
 ion transport, electrical potential difference across
 intact plant 361-366
 iron, accumulation in roots and shoots 471-473
 iron deficiency, chloroplast, electron transport rate
 313-316
 irradiance, leaf size *in vitro* 185-188
 irradiance, phenotype stability *ex vitro* after *in vitro*
 culture 321-324
 irradiance, stomata, *in vitro* culture 161-165
 isopren, biotic and abiotic factors 481-487
 isozymes as genetic markers, maize 207-211
 jasmonates 233-237, 367-371
Juglans regia 239-245
 kanamycin, organogenesis from callus culture 19-24
 kinetin, adventitious root formation, proteins 33-39
 lactate dehydrogenase, purification, chromatography,
 electrophoresis 535-539
Lactuca sativa 269-275, 309-311, 635-638
 lanthanum, shoot regeneration, thidiazuron 611-613
Laurus nobilis 239-245
 lavandin 1-6
Lavandula dentata 1-6
 lead, accumulation in roots and shoots 471-473
 leaf age, photosynthesis, transgenic plants 447-450
 leaf blade initiation, novel protein 623-625
 leaf conductance, salt stress 435-438
 leaf ontogeny, photosynthesis, nitrogen supply, wheat
 373-378
 leaf specific mass, dry mass/area ratio 239-245
Leonorus japonicus 423-425
Lepidium sativum 635-638
 light-harvesting chlorophyll-protein complexes, iron
 deficiency 313-316
 lignin, date palm resistance to *Fusarium oxysporum*
 125-130
Lilium regale 573-578
Linum usitatissimum 517-521, 611-613
 lactate dehydrogenase 535-539
 lupulin 579-585
Lycopersicon esculentum 53-57, 213-218, 573-578
 magnesium, salt stress 95-99
Magnolia soulangeana 239-245
 maize 101-104, 105-109, 207-211, 247-252, 497-501,
 599-601, 623-625, 631-634
 malacophylls, stem water transport 239-245
 malondialdehyde 89-94
 maltose, *in vitro* culture 7-12
Malus domestica 239-245
 mangrove, hydraulic conductance, NaCl stress 435-438
 mangrove, UV-B, growth 467-469
Manihot esculenta 293-296
 mapping chickpea genome, RAPD markers 195-202
 marker loci, isozymes, maize 207-211
 maternal inheritance of chloroplast DNA 47-51
 matrix and crystalloid proteins, seed protein bodies
 137-140
Medicago sativa 635-638
 medicinal plants, micropropagation 603-606
 membrane destruction, water diffusion 247-252
 membrane integrity, nodules 131-135
 membrane stability index 89-94
 mericlones *in vitro*, hop latent viroid infection 579-585
 mesophyll structure, salicylic acid 219-224
 methane evolution *in vitro*, microshoot development
 13-18
 methyl jasmonate 233-237, 367-371
 microbodies, frost hardiness, callus culture 325-331
 micropropagation *see in vitro* culture
 microsporogenesis, photosynthetic pigments 443-445
 mitochondria, root, ammonium supply 101-104
 mitosis, root growth, copper 105-109
 molecular linkage map, RAPD markers 195-202
Morus alba 83-87, 379-384
 moth bean genotypes, photosynthesis, water relations,
 nitrogen metabolism 289-292
 mulberry 83-87, 379-384
 mustard 471-473
 mutagenesis, *in vitro* culture, γ -radiation 189-193
 mycorrhizae, drought effect 263-267
 mycorrhizae, nutrient uptake 277-281
 myrtle 167-174, 239-245
Myrtus communis 167-174, 239-245
 N-(2-chloro-4-pyridyl)-N'-phenylurea, 4PU-30
 451-453
 N₂ fixation, nodules 131-135
 NaCl concentration, cellular 463-466
 NaCl stress *see* salt stress

- Najas gramenia* 95-99
Najas indica 95-99
 net photosynthetic rate *see* gas exchange
 nickel, detoxification *in vitro*, phytochelatin 627-630
 nickel, sister chromatid exchanges 591-594
Nicotiana tabacum 161-165, 321-324, 447-450, 451-453, 567-572, 627-630
 nitrate assimilation and metabolism, phytohormones 141-143, 599-601
 nitrogen cycle, allelopathy 269-275
 nitrate supply, photosynthesis 59-64, 289-292, 373-378, 517-521
 nitrogen supply, structure and ultrastructure 101-104, 185-188
 nodules, nitrogen fixation 131-135
 Norway spruce 317-320
 nucleic acids, frost tolerance 145-147
 nucleic acids, water stress 83-87
 oak 339-345
Ocimum basilicum 423-425
Ocimum campechianum 423-425
Olea europea 239-245
 ontogeny of leaf, photosynthesis 373-378, 447-450
 open-top chamber, elevated CO₂ concentration 149-152
 organogenesis, overcoming seed inviability 497-501
Origanum majorana 423-425
Oryza sativa 117-123, 203-206, 391-395, 463-466, 489-495, 635-638
 osmotic potential, glycinebetaine accumulation, salt stress 595-597
 osmotic potential, mycorrhizae, drought effect 263-267
 ovary, fungal infections 573-578
 oxidative burst, elicitor-stimulated induction of defense mechanisms 555-565
 oxidative stress, chloroplast, glutathione reductase 509-516
 oxidative stress, ionic relation and interaction 95-99
 ozone, free radical scavengers 225-232
Padus avium 65-73
 palisade cells, rRNA distribution 355-360
 palisade parenchyma, elevated CO₂ concentration 149-152
 pathogenesis-related protein, defense-related protein 417-421, 555-565, 567-572
 pea 313-316
 pearl millet 459-461
 pectinemethyl-esterases 125-130
Pennisetum glaucum 417-421, 459-461
 permeability and diffusion, water 247-252
 peroxidases during leaf senescence 41-46
 peroxidases, ploidy level, cultivar differences 89-94
 peroxidases, salt stress, germination 587-589
 peroxidases, tobacco mosaic virus 567-572
 pH, nitrate reductase, root 599-601
Phaseolus mungo 587-589
Phaseolus vulgaris 75-81, 111-115, 517-521, 523-528, 607-609
 phenolic acids, resistance to *Fusarium* infection 125-130
 phenolics, rooting, chlorogenic acid 615-618
 phenotype stability *ex vitro* after *in vitro* culture 321-324
Phillyrea angustifolia 239-245
Phoenix dactylifera 125-130, 431-433
 phosphodiesterase, tobacco mosaic virus 567-572
 phosphoenolpyruvate carboxylase, transgenic plants 447-450
 phosphomonoesterase, tobacco mosaic virus 567-572
 phosphorus, water stress 459-461
 photoautotrophy, *in vitro* culture 7-12, 161-165, 167-174, 185-188, 321-324, 503-507
 photochemical activity *see* fluorescence, chlorophyll
 photomixotrophy, *in vitro* culture 7-12, 161-165, 167-174, 185-188, 321-324, 503-507
 photoperiod, morphogenesis 615-618
 photosynthates, apoplastic and symplastic transport 517-521
 photosynthesis *see* carotenoids; chlorophyll; chloroplast; electron transport chain; gas exchange; photosystem
 photosystem 2, high temperature stress 379-384
 photosystem 2, iron deficiency 313-316
 photosystem 2, water stress 83-87
Phytigel 431-433
Picea abies 317-320
 pigeonpea 13-18
 pine 33-39, 137-140, 225-232, 233-237, 263-267
Pinus cembra 225-232
Pinus halepensis 263-267
Pinus nigra 137-140
Pinus radiata 33-39, 269-275
Pinus sylvestris 233-237
Pisum sativum 313-316
Plecthranthus amboinicus 423-425
Plecthranthus scutellaroides 423-425
 ploidy level 89-94, 189-193, 339-345, 443-445
 polyamines, photosynthesis 53-57, 529-533
 polyethylene glycol, protoplast transformation 25-31
 polygalacturonases 125-130
 polygalacturonate trans-eliminases 125-130
 polymorphism, genetic, intra-specific 455-458
 polypeptide patterns, leaf blade initiation 623-625
 polyphenol oxidase, salt stress 587-589, 607-609
 polyphenol oxidases, tobacco mosaic virus 567-572
Populus tremula 65-73
 potassium, glycinebetaine accumulation 595-597
 potassium, nitrogen supply, water stress 459-461
 potassium, salt stress 95-99
 potato 293-296, 325-331, 347-353
 potential difference across intact plant, fusaric acid 361-366
 pressure potential, mycorrhizae, drought effect 263-267
 proline, microshoot development 13-18
 proline, polyphenol oxidase, salt stress 607-609

- proline, salt stress counteraction 253-261
 proline, salt stress, germination 587-589
 proline, water stress, phytohormones 141-143
 proteases, petal senescence 411-415
 proteases, tobacco mosaic virus 567-572
 protein bodies 137-140
 protein metabolism, alleviation of salt stress 541-545
 proteins, frost hardiness 325-331
 proteins, heat shock 379-384
 proteins, leaf blade initiation 623-625
 proteins, photosynthesis, chlorophyll loss 529-533
 proteins, tobacco mosaic virus 567-572
 proteins, water stress 83-87
 protoplast transformation mediated by polyethylene glycol 25-31
 PR-proteins *see* pathogenesis-related protein, defense-related protein
Prunus armeniaca 41-46
 putrescine 529-533, 599-601
 quantitative trait loci, QTL_s 195-202, 207-211
Quercus ilex 239-245
Quercus robur 65-73, 239-245, 269-275, 339-345
Quercus suber 239-245
 random amplified polymorphic DNA 195-202, 391-395, 455-458
 regeneration *see in vitro* culture
 rehydration after water stress 75-81, 83-87, 141-143, 153-155, 263-267, 289-292, 475-478
 relative water content, photosynthesis 289-292
 relative water content, water stress 141-143
 respiration inhibitors 361-366
 respiration, petal senescence 411-415
 respiration, root mitochondria, N forms 101-104
 restriction fragment length polymorphisms 47-51
Rhizoctonia solani 417-421
 rhizome storage, proteins, RNA 297-299
 ribonucleases, TMV-infected tobacco 567-572
 ribosome, rRNA distribution in palisade cells, cotyledon 355-360
 ribulose-1,5-bisphosphate carboxylase/oxygenase activity and content, triticale and its parents 427-430
 ribulose-1,5-bisphosphate carboxylase/oxygenase, high temperature stress 379-384
 ribulose-1,5-bisphosphate carboxylase/oxygenase, leaf ontogeny, nitrogen supply 373-378
 ribulose-1,5-bisphosphate carboxylase/oxygenase, oxygen evolution, transgenic plants 447-450
 ribulose-1,5-bisphosphate carboxylase/oxygenase, water stress 83-87
 rice 117-123, 203-206, 391-395, 463-466, 635-638
 Ri-plasmids, photosynthetic traits 447-450
 root exudates 405-410, 635-638
 root formation *see in vitro* culture, root formation
 root growth, copper, cell division 105-109
 root meristematic cells, sister chromatid exchanges 591-594
 root mitochondria, ammonium supply 101-104
 root, nitrate reductase, pH 599-601
Rosmarinus officinalis 423-425
 rRNA distribution in palisade cells, cotyledon 355-360
 rye 427-430, 443-445
 saccharides *see* sugars
 safflower, somatic embryogenesis 503-507
 sago as gelling agent for *in vitro* culture 293-296
 salicylate, salt stress counteraction 253-261
 salicylic acid, chloroplast, ultrastructure 219-224
 salicylic acid, nitrate reductase, pH 599-601
 salinity *see* salt stress
 salt stress, chloroplast pigments 95-99
 salt stress, counteraction, ascorbic acid, thiamin, sodium salicylate 253-261
 salt stress, embryo derived callus culture 489-495
 salt stress, hydraulic properties 435-438
 salt stress, polyphenol oxidase, embryo culture 607-609
 salt stress, proline, polyphenol oxidase 607-609
 salt stress, protein metabolism 541-545
 salt stress, seed germination 587-589
 salt stress, salt tolerance, RAPD 391-395
 salt tolerance, glycinebetaine accumulation 595-597
 salt tolerance, *in vitro* established, *ex vitro* growth 463-466
 salt tolerance, Na, K, Mg, Ca relation and interaction 95-99
 salt tolerance through step up NaCl treatment, *ex vitro* growth 391-395, 463-466
Salix caprea 65-73
Salvia officinalis 423-425
Scenedesmus incrassulatus 367-371
Scilla indica 189-193
 sclerophylls, stem water transport 239-245
Scutellaria purpurascens 423-425
 seawater salinity, ionic relation and interaction 95-99
Secale cereale 427-430, 443-445
Secalotriticum, microsporogenesis 443-445
 seed endopeptidases, triticale 283-288
 seed fungal infections, β -glucosidase 573-578
 seed germination 301-303, 397-403, 587-589
 seed inviability, overcoming by somatic embryogenesis 497-501
 seed protein bodies, matrix and crystalloid proteins 137-140
 seed proteins in Brassicaceae systematics 547-553
 seed proteins, leaf blade initiation 623-625
 senescence, antioxidant enzymes 41-46
 senescence, petal, cultivar differences 411-415
 senna 141-143
Septoria nodorum 573-578
 sister chromatid exchanges, heavy metals 591-594
 sodium accumulation, air humidity, growth 405-410
 sodium, glycinebetaine accumulation 595-597
Solanum acaule 325-331
Solanum commersonii 325-331
Solanum tuberosum 293-296, 325-331, 347-353
 somaclonal variation *see in vitro* culture

- somatic embryogenesis 157-159, 321-324, 497-501,
soybean 405-410, 619-622
spermidine, heat stress, chlorophyll fluorescence 53-57
spermine, spermidine, photosynthesis 529-533
spruce 317-320
starch granules, water stress, elevated CO₂
concentration 149-152
Stagonospora (Septoria) nodorum 573-578
stomata morphology, insertion profile 161-165
stomatal conductance, hydroxybenzyladenine 523-528
stomatal conductance, net photosynthetic rate, hydraulic
conductance 65-73
stomatal conductance, photosynthesis, chloroplast
pigments, cadmium 59-64
stomatal conductance, salt stress 405-410, 435-438
stomatal conductance, triticale and its parents 427-430
stomatal conductance, water stress 75-81, 263-267
Streptocarpus nobilis 615-618
stroma, chloroplast, salicylic acid 219-224
Suaeda maritima 467-469
sucrose phosphate synthase, cadmium 117-123
sucrose phosphate synthase, high temperature stress
379-384
sucrose phosphate synthase, water stress 83-87
sucrose synthase, cadmium 117-123
sugar beet 523-528
sugars, GA contents, thallus fertility, *Chara* 439-441
sugars, high temperature stress 379-384
sugars, leaf size *in vitro* 185-188
sugars, photosynthesis, water stress 83-87
sugars, sucrose as carbon source, *in vitro* culture 321-
324
superoxide dismutase during leaf senescence 41-46
superoxide dismutase, ploidy level, water stress 89-94
suspension culture *see in vitro* culture
symplast, electrical potential difference across intact
plant 361-366
symplastic and apoplastic water transport 247-252
synthetic seeds, ploidy level 339-345
temperature, bacterial contaminants on algae 367-371
temperature, high, leaf ultrastructure 213-218
temperature, high, photosynthesis 379-384
temperature, low, frost tolerance, nucleic acids 145-147
terpenoids, biotic and abiotic factors 481-487
thiamine, alleviation of salt stress 253-261, 541-545
thidiazuron, shoot regeneration 333-337, 611-613
thiourea, germination 301-303
Tilia cordata 65-73
tissue culture *see in vitro* culture
tobacco 161-165, 213-218, 321-324, 447-450, 627-630
tobacco mosaic virus, soluble intercellular proteins
567-572
tomato 53-57, 573-578
transpiration *see* gas exchange
Trifolium repens 269-275, 385-389
Triglochin maritima 301-303
trigonelline, biochemical marker, competition 619-622
tricarboxylic acid 101-104, 373-378
trichloroacetic acid, biodegradation 317-320
Trichoderma viride 417-421
Triticale octoploide 427-430
triticale, *Triticosecale* 283-288, 443-445, 427-430
Triticum aestivum 89-94, 145-147, 153-155, 253-261,
373-378, 397-403, 427-430, 509-516, 529-533, 541-
545, 573-578
Triticum dicoccum 89-94
Triticum durum 89-94
tuber, yam, lactate dehydrogenase 535-539
turmeric rhizome, storage, proteins, RNA 297-299
ultraviolet-B radiation, biomass distribution 385-389
ultraviolet-B radiation, pigments 467-469
vesicular-arbuscular fungi, growth, nutrient uptake
root protection 277-281
Viburnum tinus 239-245
Vicia faba 591-594
Vigna aconitifolia 289-292
Vitis vinifera 555-565
volatile organic compound emissions, VOC 481-487
water content, petal senescence 411-415
water deficit, membrane destruction, water diffusion
247-252
water deficit, photosynthetic traits, nitrogen metabolism
289-292
water deficit, seed germination, wheat 397-403
water diffusion, membrane destruction 247-252
water potential, mycorrhizae, drought effect 263-267
water potential, photosynthesis 289-292, 475-478
water stress, amelioration of negative effects 141-143
water stress, elevated CO₂ concentration 149-152
water stress, nutrient contents, N supply 459-461
water stress, photosynthesis 83-87, 153-155
water use efficiency 475-478, 523-528
waterhemp/soybean competition 619-622
weed management 309-311, 619-622
wheat 253-261, 373-378, 427-430, 443-445, 509-516,
529-533, 541-545, 573-578
wheat cultivars, frost tolerance 145-147
wheat genotypes, photosynthesis 153-155
xanthophyll cycle 225-232
yam 535-539
Zea mays 101-104, 105-109, 207-211, 247-252, 599-
601, 623-625, 631-634
Zea mays ssp. *mays* × ssp. *parviglumis* 497-501
zeatin, shoot regeneration from immature cotyledons
333-337
Zilla spinosa 547-553
zinc, accumulation in roots and shoots 471-473
zinc, sister chromatid exchanges 591-594
Zizania latifolia 203-206
zuccini 355-360
